Georgia State University | Atlanta, GA **May 2029**
Bachelor of Science in Computer Science | GPA: 4.0

PROJECTS

E-Commerce Web Application
Personal Project | GitHub

- Developed a full-stack e-commerce application using React and Node.js/Express with product search, cart management, checkout, order history, delivery options, and order tracking.
- Designed and integrated RESTful APIs for products, carts, orders, and delivery options using asynchronous frontend-backend communication.
- Implemented persistent data storage with Sequelize and SQLite, including CRUD operations, validation, order processing, and tax/shipping calculations.
- Built reusable React components using state management, routing, event handling, and conditional rendering to create an interactive shopping experience.

Real-Time Chat Application
Personal Project | GitHub

- Built a full-stack real-time messaging app with React, TypeScript, Node.js/Express, MongoDB, and Socket.IO, supporting direct and group conversations, live message delivery, online presence, and unread counts.
- Implemented secure authentication with bcrypt password hashing, short-lived JWT access tokens, and refresh-token sessions in HTTP-only cookies, and authenticated WebSocket connections with Socket.IO middleware.
- Designed a RESTful API with Mongoose models for users, friends, friend requests, conversations, and messages, documented with Swagger, plus a friend-request system with protected routes.
- Developed a responsive UI with Tailwind CSS, shadcn/ui, and Zustand state management, including profile settings with Cloudinary avatar uploads, emoji picker, and infinite-scroll message history.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, JavaScript, TypeScript, SQL, HTML, CSS
Frameworks/Tools: React, Node.js, Express.js, Socket.IO, Tailwind CSS, Zustand, MongoDB, Sequelize, SQLite, REST APIs, JWT, Git, GitHub
Concepts: Data Structures & Algorithms, Object-Oriented Programming, Database Design, Debugging
